**CHAMBERLAIN PROFESSIONAL PRODUCTS® ACHIEVE GREEN RECOGNITION  
FROM U.S. GREEN BUILDING COUNCIL**

*Entire Line of LiftMaster Residential Garage Door Openers, Commercial Door Operators, and Gate Operators Prove Durable and Sustainable*

Elmhurst, IL – January 2009 – Chamberlain Professional Products, the single source provider for secure, convenient, quality and stylish products for every access point, is proud to announce that the entire line of LiftMaster and Elite gate operators and access products, as well as its family of LiftMaster residential garage door openers and commercial door operators, have been identified for Leadership in Energy and Environmental Design (LEED) by the U.S. Green Building Council (USGBC). LEED, a third-party certification program developed by the USGBC, is the nationally accepted benchmark for the design, construction and operation of high-performance green buildings.

Submitted through Architectural Catalog (ARCAT), a member of the USGBC and resource for architects and engineers to find products to specify for project bids, Chamberlain Professional Products achieved green recognition in two key categories.

The first qualifying category highlighted that the LiftMaster and Elite brands of gate operators, as well as the entire line of LiftMaster residential garage door openers and commercial door operators, are more durable and require less maintenance than similar products. The second category focused on the fact that these products are recyclable or biodegradable after use.

"Chamberlain Professional Products continues to be an industry leader, as we have been for more than 100 years, and adding this recognition from the USGBC to our long list of product benefits helps to further solidify our reputation for providing quality, dependable and award-winning products," notes Ken Roehl, vice president, marketing, Chamberlain Professional Products. "With the added support of this USGBC listing, our network of professional dealers is available to provide builders, architects or specifiers with green, sustainable solutions on both residential and commercial door or gate installations."

**CHAMBERLAIN PROFESSIONAL PRODUCTS ACHIEVE USGBC RECOGNITION – PAGE TWO**

Chamberlain Professional Products' entire line of LiftMaster residential garage door openers, commercial door operators and LiftMaster and Elite gate operators are listed on the ARCAT Web site, which added their own "Sustainable Design" emblem to visually signify that these products are environmentally preferred. In addition, ARCAT helps to qualify products that will support LEED credit earnings, based on the rating system set forth by the USGBC. While actual products cannot earn LEED credits, projects that effectively use products that yield a quantifiable energy or resource savings, such as those found in the LiftMaster product line, can be awarded a LEED certification.

Coupled with helping a project earn LEED credits, all Chamberlain Professional Products are engineered with quality machine work and rugged construction, providing engineers and architects with the comfort of knowing the garage door openers, gate operators and access products they specified will open and close all day and night. Also, Chamberlain's complete line of residential garage door openers, commercial door operators and gate operators are designed to meet or exceed UL325 safety standards and requirements.

The Chamberlain Group, Inc. manufactures and markets access control products including residential garage door openers, commercial door operators, residential and commercial gate operators, telephone entry systems and related access control products. Visit [www.liftmaster.com](http://www.liftmaster.com) to find a dealer near you as well as more information on the entire line of Chamberlain Professional Products.
