CHAMBERLAIN® PREVIEWS
LOW-VOLTAGE ALTERNATE POWER SYSTEM AT IBS 2008
New System Designed to Power LiftMaster® Residential Jackshaft Opener

Elmhurst, IL – February 2008 – The Chamberlain Group, Inc., the single source provider for secure, convenient, quality and stylish products for every access point, reveals the new LiftMaster Alternate Power System at the 2008 International Builders' Show in Orlando, Florida. Low-voltage and UL-approved, this power system serves as a permanent solution to power the side-mounted LiftMaster Residential Jackshaft Opener (Model 3800). The new LiftMaster Alternate Power System (580LM) is scheduled to be available in early April, 2008.

For an increasing number of homeowners, the garage is now serving as an additional functional space within the home. This trend has led to new and unique garage designs with very low, cathedral or obstructed ceilings which are being adopted by builders, as they add depth and style to this newfound functional space. Since many of these applications are not compatible with traditional ceiling mounted garage doors, Chamberlain introduced the side-mounted LiftMaster Residential Jackshaft Opener in early 2006.

"Traditionally, electricity is supplied on the garage ceiling to power a garage door opener. If an electrical outlet is not present within six feet of the garage door opener's location, a homeowner would have to hire an electrician to run power to the Model 3800 installation area, which can be both inconvenient and costly. The new LiftMaster Alternate Power System solves this issue," said Dan Nixa, director of marketing, Chamberlain Professional Products.

This innovative system provides homeowners with a low cost, UL-approved solution to conveniently provide power. Designed to be easily installed by professional

dealers, the system is specifically designed for use with the LiftMaster Model 3800.

Compatible with the optional EverCharge™ Standby Power System (Model 475LM), this new power system reliably operates the garage door opener during power outages.
