CHAMBERLAIN®

CHAMBERLAIN® UNVEILS ENTIRE LINE OF LIFTMASTER® WIRELESS ACCESS CONTROL AND COMMUNICATIONS SOLUTIONS AT IBS 2008

Elmhurst, IL – February 2008 – The Chamberlain Group, Inc., a single source provider for secure, convenient, quality and stylish products for every access point, is proud to introduce a line of fully integrated LiftMaster wireless access control and communication solutions. These professionally installed, comprehensive offerings allow builders the opportunity to present homeowners with a variety of options for keeping their home safe and secure, both inside and out.

Backed by the proven service and support synonymous with all Chamberlain products, this exceptional line of wireless access and communication control devices work together reliably with crisp, digital clarity. The LiftMaster wireless access systems and accessories also use minimal amounts of power, providing a wealth of exceptional features and benefits that any homeowner can appreciate. In addition, as a leader in access solutions, Chamberlain has provided homeowners with easy, overall site control by engineering these products to be fully compatible with all LiftMaster garage door opener and gate access systems. This allows homeowners to have full wireless control over all the access points of their home and property.

No Limits to Your Installation

Whether geared toward single family, multi-unit residential or commercial applications, without the physical limitation of wire, these products can be professionally installed just about anywhere. This provides a newfound freedom for builders through simplicity and ease of installation during the design and construction phases.

Individualized Wireless Access Control Solutions

There is a wide variety of gate and door access control units for builders to

consider when working with an authorized LiftMaster dealer to customize a wireless access system. Wireless gate and door access control products range from gate access panels for multiple installations to self-contained keypads for a single gate or door entry. These products offer the homeowner a diverse array of wireless access solutions which can span from a main entry unit to remote access points, such as card readers, keypads, radio receivers and hand-held transmitters. The wireless access control products and accessories use both 900 MHz and 315 MHz Security+^{TM} frequencies and are compatible with all LiftMaster intercoms and telephone interface units, all with the simple push of a button.

Communication Where you Want It

Used by homeowners to screen visitors and facilitate access, the family of compatible access and communication controls is extremely versatile and easy to use, featuring push-to-learn programming and built-in transmitters to open virtually any gate or door within the system. In order to meet the individual needs of each homeowner, this product family is available as an indoor flush mount, outdoor weatherproof, portable intercom and/or an indoor/outdoor intercom, allowing crystal-clear communication between all the wireless devices in any home or commercial setting. The units are also offered with a telephone interface, enabling voice communication and remote operating capabilities controlled through any connected phone.

Out of Sight, Still In Control

Even when obstacles, such as trees, or challenging environments block one's line of site, LiftMaster signal management wireless repeaters, which are designed to improve signal strength in large or obstructed site applications, allow a secure, encrypted signal to permit access.
