

**CHAMBERLAIN® OFFERS HIGH-END LIFTMASTER® GARAGE DOOR OPENER ACCESSORIES WITH SMART FUNCTIONALITY AND SLEEK DESIGN**

Elmhurst, IL – February 2008 – The Chamberlain Group, Inc., a single source provider for secure, convenient, quality and stylish products for every access point, offers builders and homeowners an array of high-end accessories that add a touch of class with each and every functional application.

With an increasing number of homeowners looking for high-end details to add into their homes and vehicles, Chamberlain developed both the LiftMaster® Premium Remote Control and the LiftMaster Smart Control Panel™. Adding to the customized upgrades builders can offer homeowners, these garage door opener accessories deliver superior design, performance, functionality and convenience.

The LiftMaster Premium Remote Control (Model 373P) is the first garage door opener remote control with smart technology. Sensing the user's fingers prior to them touching the remote, the Premium Remote Control automatically illuminates cool blue light, which allows users to clearly see and operate the remote control.

This 3-button LiftMaster Premium Remote Control features narrowband technology which transmits garage door opener signals with reduced interference. Also, when a button is pressed, the remote flashes to tell the user the signal has been transmitted. For extended remote control operation, built-in lighting technology uses a "sleep" mode to prolong and conserve battery power.

The Premium Remote can control up to three garage door openers, or be programmed to work with Chamberlain's LiftMaster and Elite™ gate operators and remote light control products for added security and convenience. The remote is compatible with all LiftMaster 3000 series garage door openers and all 315MHz LiftMaster and Elite brand gate operators.

The Premium Remote Control can be quickly and easily programmed from the garage door opener powerhead or control panel, depending on the model, and is equipped with LiftMaster's Security+<sup>®</sup> rolling code technology to ensure the code can never be duplicated. A visor clip and batteries are also included.

An additional accessory that builders can offer is the LiftMaster 398LM Smart Control Panel<sup>™</sup>. Designed with innovative options such as a 1¼" tall by 2¼" wide LCD screen, this innovative Smart Control Panel features a backlight/nightlight that informs homeowners of the time and the garage's temperature as well as short status messages about the garage door opener's performance.

Using the buttons located on the side of the panel, the Smart Control Panel can be quickly and easily programmed. In order to save on installation time, extra remotes can be programmed directly from the panel without the need to climb a ladder where the garage door opener is located. In addition to the garage door operation button, the 398LM also features two auxiliary buttons. One button can be programmed to lock out all remote control signals. The other button can be programmed to turn the garage door opener lights on and off. In addition, the Smart Control Panel includes a motion-detecting feature that automatically turns on garage door opener lights when movement is detected in the garage.

Currently not available with any other garage door opener system, the LiftMaster Smart Control Panel gives homeowners up-to-the-minute diagnostic information. The 398LM's unique Messaging Display Center alternates the time, the garage's temperature in Fahrenheit or Celsius, and short status messages on the opener's components. The Smart Control Panel's status messages are optimized when installed with a LiftMaster opener, such as the Model 3850 EverCharge<sup>®</sup> Standby Power System. For example, if a power failure occurs, a status message will show homeowners when the opener is operating in standby power mode and how much battery life remains.

Other status messages include notification if the opener's sensors are misaligned, if the remote controls are "locked" out, or if the Motion-Detecting feature is turned on or off. In addition to English, the Smart Control Panel can also display information and messages in French or Spanish.

Both the LiftMaster 373P Premium Remote Control and the LiftMaster 398LM Smart Control Panel are available exclusively through an authorized LiftMaster dealer. For inquiries on LiftMaster accessory products or to find an authorized LiftMaster dealer near you, please contact 800.528.6563 or visit [www.liftmaster.com](http://www.liftmaster.com).

The Chamberlain Group, Inc. manufactures and markets access control products including residential garage door openers, commercial door operators, residential and commercial gate operators, telephone entry systems and related access control products.
